Derivatives of inverse functions

Derivatives of inverse trigonometric functions

Derivative of inverse sine

- The function $y = \sin^{-1}(x)$.

$$\begin{aligned}x &= \sin(y) \\ \frac{dx}{dy} &= \frac{d \sin(y)}{dy} \frac{dy}{dx} \\ \frac{dx}{dy} &= \frac{1}{\cos y} \\ \frac{dy}{dx} &= \frac{1}{\text{derivative of sine function}}\end{aligned}$$

General expression for derivative of inverse sine trigonometric functions

The general expression for derivative of inverse sine trigonometric function is

•

$$\frac{d \sin^{-1}(x)}{dx} = \frac{1}{\sqrt{1-x^2}}$$

General expression for derivative of any inverse of any function

- A function is taken $f(x)$.
- A function is taken $f(y)$.

Condition for application The condition for application of the general expression in inverse of any function is

- The derivative of function $f(x)$ be equal to $g(x)$.
-

$$\frac{d}{dx} f(x) = g(x)$$

General expression for inverse

- The function $y = f^{-1}(x)$ is taken.
- The general expression for inverse of a function y is expressed as
-

$$\frac{d}{dx} f^{-1}(x) = \frac{1}{g(y)}$$

Formulae for derivative of standard trigonometric functions

Inverse sine

The expression for derivative of inverse sine is

•

$$\frac{d}{dx} \sin^{-1}(x) = \frac{1}{\sqrt{1-x^2}}$$

Inverse cosine

The expression for derivative of inverse sine is

•

$$\frac{d}{dx} \cos^{-1}(x) = \frac{-1}{\sqrt{1-x^2}}$$

Inverse tangent

The expression for derivative of inverse tangent is

•

$$\frac{d}{dx} \tan^{-1}(x) = \frac{1}{1+x^2}$$

Inverse cotangent

The expression for derivative of inverse cotangent is

•

$$\frac{d}{dx} \cot^{-1}(x) = \frac{-1}{1+x^2}$$

Inverse secant

The expression for derivative of inverse secant is

•

$$\frac{d}{dx} \sec^{-1}(x) = \frac{1}{x\sqrt{1-x^2}}$$

Inverse cscant

The expression for derivative of inverse cscant is

•

$$\frac{d}{dx} \csc^{-1}(x) = \frac{-1}{x\sqrt{1-x^2}}$$

Euler's number

Expression for euler's number in terms of $x \rightarrow 0$

The expression for euler's number in terms of $x \rightarrow 0$ is

•

$$e = \lim_{x \rightarrow 0} (1+x)^{\frac{1}{x}}$$

Expression for euler's number in terms of $n \rightarrow \infty$

The expression for euler's number in terms of $n \rightarrow \infty$ is

•

$$e = \lim_{h \rightarrow \infty} \left(1 + \frac{1}{h}\right)^h$$

Expression for euler's number in terms of binomial expansion

The expression for euler's number in terms of binomial expansion is

•

$$e = 1 + \frac{1}{1!} + \frac{1}{2!} + \frac{1}{3!} + \dots + \infty$$

Identities in euler's number

Expression for hyperbolic sine

The expression for hyperbolic sine is

•

$$\sinh(x) = \frac{e^x - e^{-x}}{2}$$

Expression for hyperbolic cosine

The expression for hyperbolic cosine is

•

$$\cosh(x) = \frac{e^x + e^{-x}}{2}$$

Expression for hyperbolic tangent

The expression tangent hyperbolic is

•

$$\tanh(x) = \frac{e^x - e^{-x}}{e^x + e^{-x}}$$

Expression for hyperbolic cotangent

The expression for hyperbolic cotangent is

•

$$\coth(x) = \frac{e^x + e^{-x}}{e^x - e^{-x}}$$

Expression for hyperbolic secant

The expression for hyperbolic secant is

•

$$\operatorname{sech}(x) = \frac{2}{e^x + e^{-x}}$$

Expression for hyperbolic cscant

The expression for hyperbolic cscant is

- $$\operatorname{csch}(x) = \frac{2}{e^x - e^{-x}}$$

General relation of trigonometric identities and hyperbolic identities

- The sign of operators is interchanged.
- The sign of operators is interchanged among trigonometric and hyperbolic identities
- An expression of $a \cos(x) + b \sin(x)$ in hyperbolic functions is reverted to
-

$$a \cosh(x) - b \sinh(x)$$

Trigonometric identities

Expression for sine and cosine in terms of their square

The expression for sine and cosine in terms of their square is

- $$\cos^2 \theta + \sin^2 \theta = 1$$

Expression for tangent in terms of secant

The expression for tangent in terms of secant is

$$1 + \tan^2 \theta = \sec^2 \theta$$

Expression for cotangent in terms of cscant

The expression for cotangent in terms of cscant is

$$\cot^2 \theta + 1 = \csc^2 \theta$$

Expression for $\cos 2\theta$ in terms of \sin and \cos

The expression for $\cos 2\theta$ in terms of \sin and \cos is

$$\cos 2\theta = \cos^2 \theta - \sin^2 \theta$$

Expression for $\sin 2\theta$ in terms of \sin and \cos

The expression for $\sin 2\theta$ in terms of \sin and \cos is

$$\sin 2\theta = 2 \sin(\theta) \cos(\theta)$$

Expression for $\cos 2\theta$ in terms of \tan

The expression for $\cos 2\theta$ in terms of \tan is

$$\cos(2\theta) = \frac{1 - \tan^2 \theta}{1 + \tan^2 \theta}$$

Expression for $\sin 2\theta$ in terms of \tan

The expression for $\sin 2\theta$ in terms of \tan is

$$\sin(2\theta) = \frac{2 \tan \theta}{1 + \tan^2 \theta}$$

Expression for $\tan 2\theta$ in terms of \tan

The expression for $\tan 2\theta$ in terms of \tan is

$$\tan(2\theta) = \frac{2 \tan(\theta)}{1 - \tan^2 \theta}$$

Hyperbolic identities

Expression for hyperbolic sine and hyperbolic cosine in terms of their square

The expression for hyperbolic sine and hyperbolic cosine in terms of their square is

$$\cosh^2(x) - \sinh^2(x) = 1$$

Expression for hyperbolic tangent in terms of secant

The expression for hyperbolic tangent in terms of secant is

$$1 - \tanh^2 x = \operatorname{sech}^2(x)$$

Expression for hyperbolic cotangent in terms of cscant

The expression for hyperbolic cotangent in terms of cscant is

$$\coth^2(x) - 1 = \operatorname{csch}^2(x)$$

Expression for $\cosh(2x)$ in terms of $\cosh(x)$ and $\sinh(x)$

The expression for $\cosh(2x)$ in terms of \cosh and \sinh is

$$\cosh(2x) = \cosh^2(x) + \sinh^2(x)$$

Expression for $\sinh(2x)$ in terms of $\cosh(x)$ and $\sinh(x)$

The expression for $\sinh(2x)$ in terms of \cosh and \sinh is

$$\sinh(2x) = 2\sinh(x)\cosh(x)$$

Expression for $\cosh(2x)$ in terms of $\tanh(x)$

The expression for $\cosh(2x)$ in terms of $\tanh(x)$ is

$$\cosh(2x) = \frac{1 + \tanh^2 x}{1 - \tanh^2 x}$$

Expression for $\sinh(2x)$ in term of $\tanh(x)$

The expression for $\sinh(2x)$ in terms of $\tanh(X)$ is

$$\sinh(2x) = \frac{2\tanh(x)}{1 + \tanh^2(x)}$$

Expression for $\tanh(2x)$ in terms of $\tanh(x)$

The expression for $\tanh(2x)$ in terms of $\tanh(X)$ is

$$\tanh(2x) = \frac{2\tanh(x)}{1 + \tanh^2(x)}$$
